Zeughausstrasse 31
8004 Zürich

Dear Sir or Madam of DeepJudge,

My name is Shengdi Chen, and I am a data scientist and Linux system administrator. I am excited to apply for the position of machine-learning engineer at DeepJudge.

I am a recent graduate of the Bachelor and Master program of Computational Science and Engineering (CSE) at ETH, majoring in novel disciplines of deep learning. For my Master's Thesis, I studied the effect of masking for operator-learning of differential-equations. Prior to that, my Bachelor's Thesis applied reinforcement-learning to the game of Tetris. Both projects utilized PyTorch as the underlying DL framework.

Parallel to my studies, I have been working as a programmer at the department of educational technology of East China Normal University in Shanghai, developing a cross-platform application for speech correction in Mandarin for children with autism. The work has seen six registered patents and one publication to date.

Also fluent in German and Chinese, I can bridge the communication across diverse teams at DeepJudge and directly contribute to the global market expansion efforts. With experience in PyTorch-driven deep learning and Linux administration, I believe my profile aligns well with the mission statement of DeepJudge, and I am motivated to collaborate with experts of the field to design performant, large-scale models on an international scale.

As a coding project sample, my Master's Thesis on operator-learning using PyTorch is available in this repository[📄], along with the accompanying thesis document[📄]. To supplement my application, I further nominate the project's supervisor Prof. Mishra[✉] and advisor Mr. Raonic[✉] as reference persons.

I am available for in-person interviews at your convenience and would appreciate the opportunity to discuss my qualification details for the proposed position as ML engineer. I would like to thank you for your consideration of my application and look forward to hearing from you soon!

Respectfully yours,
Shengdi Chen
